Extended Abstract

Introduction

Today, the land component in the concepts of place, space, location, region and area, as defined by the restriction is the identity of human communities, regions and locations; it is valuable for individuals and groups of elements and components of their identity to (Kaviani Rad, 1389: 56). One result of such an event, where the incidence of competition is the competition in different geographical regions and in different periods of time, shows its various forms. In the present study attempted to examine the roots and the main factors in the regional competition to be the perfect congruence of language, cultural, religious, and ethnic and ... Has, despite this, competition between cities where Meybod and Duck in Yazd province since the issue has become complicated and sensitive.

Methodology

The main research question is: where the continuing rivalry between city Ardakan and Meybod the complete assimilation of culturally learned, and what are lies? Administrative divisions. Also according to what I was told it was designed for a specific pattern? Competitions where the origin of the various factors affecting the political, economic, social and geographic, as political geographers has been an interest of this research will be classified in the range of applied

research. Study with a descriptive - analytical and using library resources, documents and software SPSS field test is intended to be theoretical and practical solidarity, where the roots campaigns, in the sense of spatial data and the relationship between two variables can explain. In this connection, the result of developments occurring on effective of Belong place where rivalries between the cities of Yazd, Ardakan and Meybod about to be dissected and analyzed the relationship between two variables and due to be tangible. In addition to the character of the place due to a pattern of competition from September to reach the place.

Results and Discussion

Today, the land component in the concepts of place, space, location, region and area, as defined by the restriction is the identity of human communities; Area and place for individuals and groups of elements and components is valuable because it represents their identity. One result of such an event, where the incidence of competition is the competition in different geographical regions and in different periods of time, shows its various forms.

Spatial competition model can be used in a variety of measures, including the scope and location in the following categories offered:

Mental levels: the level of scale that most people who happen to belong to a particular location with respect to the other places comes to prefer, This state of mind and more often there are people in all.

Spoken level: This level is significant from two aspects, one of the poems and articles in praise of human habitats and other open areas adjacent to Objective that can be used in making various jokes that the place is awarded to the competitor's sites.

Behavioral level with the spatial manifestation of this scale that it is referred to the behavioral level Due to competition from October to find a space and place, presenting a vision of the creator in the geography space is competitive For example, conflicts occurred, protests and collective petitions and writing.

Conclusion

Considering that the main research questions were: to identify the spatial continuity of competitions Ardakan and Meybod the complete assimilation of those two cities was culturally, According to the literature in relation to the original premise of this paper was formulated so that the roots of this conflict Should take place in affiliations of those who knew the city can be seen in the last interaction Administrative divisions not only in contemporary issues.
