

The risk factors of the cognitive impairment in Iranian MS patients and its prevention

Abdorrezza Naser Moghadasi

1-MS Research Center, Neuroscience institute, Tehran University of Medical Science, Tehran, Iran

Cognitive impairment is one of the most important complications of MS that could interfere with daily life. Several studies have shown that cognitive impairment is common in MS patients.

Sex, EDSS, Vitamin D and education are some of these factors.

Several different risk factors have been recognized as predisposing entities which could affect cognition in MS patients.

In this presentation I try to discuss these risk factors and the way of prevention.

Keywords :Cognition; Multiple Sclerosis; Risk factors
