تهران ۴-۲ بهمن ماه ۱۳۹۳ / مرکز همایش های ابوریحان دانشگاه شهید بهشتی

### Fertility synthetic and ethical issues

With the increasing importance of reproduction and childbearing families in continuity, Introduction: contradictions, these methods should be told. The purpose of this paper is to clarify the ethical problems.

، PubMed ،Methods: The review study to systematically search engines and web sites Google Scholar UpToDate through keyword Ethic, Artificial fertilization, Fertilization ،magiran ،SID ،IRANMEDEX homogeneous, Fertilization heterogeneous, Uterine Rent Articles Searched . Only articles that included the keywords as they were selected.

. In the type of intrauterine if the owners Results: Artificial insemination is in or outside the womans uterus of the embryo have Parity relationship homogeneous and otherwise heterogeneous fertilization is called.About homogeneous fertilization is less disagreement And the relative legitimacy of this method, there is no doubt. In the heterogeneous fertilization issues is considere such as the child has not legal parentage than husband and wife that want a child on the other hand attribution a child to a stranger men and women that not want a child is an injustice and is contrary to good morals. In The embryo developed in the uterus of third parity two wives must be satisfied for transfer the fertilized embryo to a third parity and female parity with the .knowledge and satisfaction get embryo

Due to the difference between jurists and lawyers in the field of assisted reproductive Conclusions: techniques, So exception cases that embryo is made egg and sperm of the husband and wife should be do full percautions.
